Dia 18 de Dezembro (sexta-feira), às 15h, na Sala A2-25

“Structure theorems for semi-bounded groups”
(continuation of SLM talk).

PANTELIS ELEFThERIOU

(CMAF, Univ. de Lisboa)

Abstract:

We present the solution of two recent conjectures by Peterzil for semi-bounded sets and groups, and we derive the Compact Domination Conjecture in this setting. The proof employs a new pregeometry that is yield by a closure operator which is defined like the usual algebraic one, after replacing the "finite set" by a "short interval".
