Dia 18 de Outubro (quinta-feira), às 15h, na Sala A2-25

“Generic stability, forking and thorn-forking”

ALEX USVYATSOV

(CMAF Univ. Lisboa)

Abstract:

The goal is to prove the following theorem that I stated in a previous talk: Let \mathfrak{p} be a generically stable type which forks over a set A . Then it thorn-forks over A . This is a joint work with Dario Garcia and Alf Onshuus. In the beginning of the talk I will also discuss (without proofs) some basic properties of generically stable types.
